

E-MAIL & 2010 Technology

Thank you to those who chose to have their invoices e-mailed.
Any others interested in this form of billing please drop us an e-mail.

* REPAIRS *

WOW, what a month! Or should we say wow, what a crazy 9 days! July was text book in our industry. In 9 days we had 3 filters crack, several motors & time clocks go out, water levelers break, plumbing leaks & one electrical line fry & fizzle from the electrical panel out to the equipment. Luckily this didn't all happen to the same customer!

Yes these things happen! If we looked a bit frazzled, now you know why. Enjoy some of our pictures.

* TIME CLOCKS / CIRCULATION *

FYI – During the monsoon season, pools need to run 1 hour for every 10 degrees outside for proper circulation. Pools are set between 8 & 12 hours and in most cases at night. If you have a remote inside your house for the timer, please make sure it's running at least 9 hours. Thanks!

* POOL DRAINS *

Ok, so this picture is a minor exaggeration. Our water starts out hard and only gets worse. All pools need to be drained every 2-3 years. The water becomes corrosive, it can and will begin to hurt the pool surface & equipment. Also, no matter how many chemicals we put into the water, the chemicals will fight each other and not work at all, possibly causing your pool to have **yellow**, **black** or **green** algae. Please call today to discuss getting your pool drained.

* PEST CONTROL IS A POOL THING *

Another FYI – We have been leaving notes about black widows, brown recluse and other pests we have been seeing in the skimmer baskets and lids. We would hate for anyone, especially kids, to stick their hands inside and get a surprise 'love bite' from one of these critters. We do kill them when we can catch them. Although, we do suggest when you spray around your house, you don't forget about the pool area.
